==========

IMDB Sentiment Analysis Project

Student: Forkan Amin

Date: 21/4/2026

==========

This project compares three approaches for sentiment analysis:

1. TF-IDF with Logistic Regression

2. Word2Vec with Logistic Regression

3. Fine-tuned BERT

1. Install Required Libraries

```
!pip install datasets
!pip install gensim
!pip install transformers
!pip install scikit-learn
!pip install torch
!pip install pandas
!pip install numpy
!pip install matplotlib
!pip install seaborn

print("All libraries installed successfully!")
```

```
Requirement already satisfied: six>=1.5 in /usr/local/lib/python3.12/dist-packages (from python-dateutil>=2.7->matplotlib)
Requirement already satisfied: seaborn in /usr/local/lib/python3.12/dist-packages (0.13.2)
Requirement already satisfied: numpy!=1.24.0,>=1.20 in /usr/local/lib/python3.12/dist-packages (from seaborn) (2.0.2)
Requirement already satisfied: pandas>=1.2 in /usr/local/lib/python3.12/dist-packages (from seaborn) (2.2.2)
Requirement already satisfied: matplotlib!=3.6.1,>=3.4 in /usr/local/lib/python3.12/dist-packages (from seaborn) (3.10.0)
Requirement already satisfied: contourpy>=1.0.1 in /usr/local/lib/python3.12/dist-packages (from matplotlib!=3.6.1,>=3.4->
Requirement already satisfied: cycler>=0.10 in /usr/local/lib/python3.12/dist-packages (from matplotlib!=3.6.1,>=3.4->seab
Requirement already satisfied: fonttools>=4.22.0 in /usr/local/lib/python3.12/dist-packages (from matplotlib!=3.6.1,>=3.4-
Requirement already satisfied: kiwisolver>=1.3.1 in /usr/local/lib/python3.12/dist-packages (from matplotlib!=3.6.1,>=3.4-
Requirement already satisfied: packaging>=20.0 in /usr/local/lib/python3.12/dist-packages (from matplotlib!=3.6.1,>=3.4->s
Requirement already satisfied: pillow>=8 in /usr/local/lib/python3.12/dist-packages (from matplotlib!=3.6.1,>=3.4->seaborn
Requirement already satisfied: pyparsing>=2.3.1 in /usr/local/lib/python3.12/dist-packages (from matplotlib!=3.6.1,>=3.4->
Requirement already satisfied: python-dateutil>=2.7 in /usr/local/lib/python3.12/dist-packages (from matplotlib!=3.6.1,>=3
Requirement already satisfied: pytz>=2020.1 in /usr/local/lib/python3.12/dist-packages (from pandas>=1.2->seaborn) (2025.2
Requirement already satisfied: tzdata>=2022.7 in /usr/local/lib/python3.12/dist-packages (from pandas>=1.2->seaborn) (2026
Requirement already satisfied: six>=1.5 in /usr/local/lib/python3.12/dist-packages (from python-dateutil>=2.7->matplotlib!
```

2. Import Libraries

```
import numpy as np
import pandas as pd
import matplotlib.pyplot as plt
import seaborn as sns
import re
import html
from sklearn.feature_extraction.text import TfidfVectorizer
from sklearn.linear_model import LogisticRegression
from sklearn.metrics import accuracy_score, precision_score, recall_score, f1_score
from sklearn.metrics import classification_report, confusion_matrix

# Word2Vec
from gensim.models import Word2Vec
from gensim.utils import simple_preprocess

# BERT and transformers
from transformers import BertTokenizer, BertForSequenceClassification
from transformers import Trainer, TrainingArguments
import torch
from torch.utils.data import Dataset

# Dataset loading
from datasets import load_dataset

# Utilities
import time
import warnings
warnings.filterwarnings('ignore')

# Set random seed for reproducibility
SEED = 42
np.random.seed(SEED)
torch.manual_seed(SEED)
if torch.cuda.is_available():
    torch.cuda.manual_seed_all(SEED)

print("All libraries imported successfully!")
print(f"PyTorch version: {torch.__version__}")
print(f"CUDA available: {torch.cuda.is_available()}")
if torch.cuda.is_available():
    print(f"GPU: {torch.cuda.get_device_name(0)}")
```

```
All libraries imported successfully!
PyTorch version: 2.10.0+cu128
CUDA available: True
GPU: Tesla T4
```

3. Load the IMDB Dataset

```
# Loading the IMDB dataset from Hugging Face
# The dataset contains 50,000 movie reviews (25,000 train, 25,000 test)
# Each review is labeled as positive (1) or negative (0)

print("Loading IMDB dataset from Hugging Face...")
imdb_dataset = load_dataset("imdb")

# Let's examine the dataset structure
print(f"\nDataset structure:")
print(f"Training set size: {len(imdb_dataset['train'])}")
print(f"Test set size: {len(imdb_dataset['test'])}")

# Split the training set into train and validation sets
```

```
# Original: 25,000 training samples
# We'll use: 20,000 for training, 5,000 for validation
train_texts = imdb_dataset['train']['text'][:20000]
train_labels = imdb_dataset['train']['label'][:20000]
val_texts = imdb_dataset['train']['text'][20000:25000]
val_labels = imdb_dataset['train']['label'][20000:25000]
test_texts = imdb_dataset['test']['text']
test_labels = imdb_dataset['test']['label']

print(f"\nFinal splits:")
print(f"Training samples: {len(train_texts)}")
print(f"Validation samples: {len(val_texts)}")
print(f"Test samples: {len(test_texts)}")

# Check class balance
print(f"\nClass distribution in training set:")
print(f"Positive reviews: {sum(train_labels)}")
print(f"Negative reviews: {len(train_labels) - sum(train_labels)}")

# Let's look at a sample review
print(f"\nSample review (positive):")
print(f"Text: {train_texts[0][:300]}...")
print(f"Label: {train_labels[0]} (1 = positive, 0 = negative)")
```

```

🔍 KEY OBSERVATIONS:

1. BEST PERFORMING MODEL: BERT
   • Accuracy: 89.0% (highest among all models)
   • F1-Score: 89.0% (balanced precision and recall)
   • Improvement over TF-IDF: +0.4%

2. TRADE-OFFS:
```

```
   • BERT: Highest accuracy but 113x slower than TF-IDF
   • TF-IDF: Very fast (5.2 seconds) with competitive accuracy (88.6%)
   • Word2Vec: Moderate speed (42.8 seconds) with lower accuracy (84.0%)

3. ERROR PATTERNS:
   • All models struggle with sarcasm and mixed sentiments
   • BERT handles negation better ("not bad" vs "not good")
   • TF-IDF performs well with strong sentiment indicators
   • Word2Vec captures semantic similarity but loses word order

4. PRACTICAL RECOMMENDATIONS:
      Use BERT when: Maximum accuracy is critical, GPU available
      Use TF-IDF when: Real-time predictions needed, CPU only
      Use Word2Vec when: Balance of speed and semantic understanding needed

5. SURPRISING FINDING:
   TF-IDF performs remarkably well (88.6%) considering its simplicity!
   This makes it an excellent baseline and practical choice for many applications.

6. BERT IMPROVEMENT POTENTIAL:
   • With more training data (25k samples), BERT could reach 92%+ accuracy
   • Hyperparameter tuning could add 1-2% improvement
   • Ensemble with TF-IDF could boost performance further

╔═══════════════════════════════════════════════════════════════════╗
│                      PROJECT SUMMARY                              │
╚═══════════════════════════════════════════════════════════════════╝

📌 WHAT WE DID:
   Built and compared 3 sentiment analysis models on 50,000 IMDB reviews:
   • TF-IDF + Logistic Regression
   • Word2Vec + Logistic Regression
   • BERT (Fine-tuned)

═══════════════════════════════════════════════════════════════════

📊 RESULTS SUMMARY:

   ┌──────────────┬──────────┬──────────┬──────────┬──────────┐
   │    Model     │ Accuracy │ Precision│  Recall  │ F1-Score │
   ├──────────────┼──────────┼──────────┼──────────┼──────────┤
   │   TF-IDF     │   88.6%  │   89.3%  │   87.7%  │   88.5%  │
   │  Word2Vec    │   84.0%  │   84.6%  │   83.3%  │   83.9%  │
   │    BERT      │   89.0%  │   89.2%  │   88.8%  │   89.0%  │
   └──────────────┴──────────┴──────────┴──────────┴──────────┘

═══════════════════════════════════════════════════════════════════

🏆 KEY FINDINGS:

   1. BEST ACCURACY: BERT (89.0%) - beats TF-IDF by 0.4%

   2. FASTEST TRAINING: TF-IDF (5 seconds) - 113x faster than BERT

   3. BEST BALANCE: TF-IDF - excellent speed with competitive accuracy

   4. WORD2Vec DISAPPOINTS: Underperformed both TF-IDF and BERT

═══════════════════════════════════════════════════════════════════

⚖️ TRADE-OFFS:

   ┌──────────────┬──────────┬──────────────┬────────────────────┬──────────────┐
   │  ACCURACY    │  SPEED   │  RESOURCES   │  INTERPRETABILITY  │  BEST FOR    │
   ├──────────────┼──────────┼──────────────┼────────────────────┼──────────────┤
   │   BERT       │  Slow    │    GPU       │        Low         │  Maximum     │
```
